

Dear Rep Marsh,

I am forwarding the attached document which was originally sent to the quorum prior to the first session. As my note to Dr. Woods states, it is a compilation of ten years of research into Lyme disease. This document is not opinion based and any statement is followed with a reference; most likely why many medical journals have published my letters to the editor. You may want to view the latest letter published in the BMJ as Editor-in-Chief Dr. Fiona Godlee recognized the importance of what I had to present. Dr. Godlee asked the corresponding author to respond to my inquiry and he outright refused to reply.

Letter to the editor of the BMJ:

Lyme borreliosis: diagnosis and management

<https://www.bmj.com/content/369/bmj.m1041/rr-1>

I respectfully ask that you take as long as you like to read the attached PDF because there has been a controlling of the narrative and a suppression of the truth/facts/scientific references. If you choose not to read this document then you will not have 100% of the story and I'm not sure that we can arrive at a balanced conclusion to this commission.

Respectfully submitted,

Carl Tuttle

Lyme Endemic Hudson, NH
